

Tugas Basis Data Lanjut

Membuat Relasi One to Many dan Many to Many

Nama : Gigih Prasetya

NIM : 17050623013

Prodi : D3 Manajemen Informatika

A. One to Many

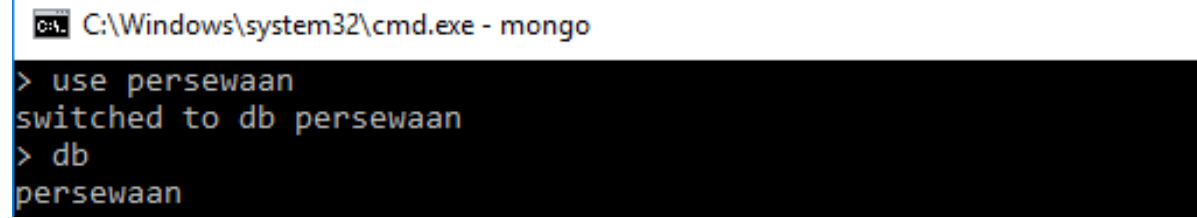

1. membuat database

> use persewaan

switched to db persewaan

> db

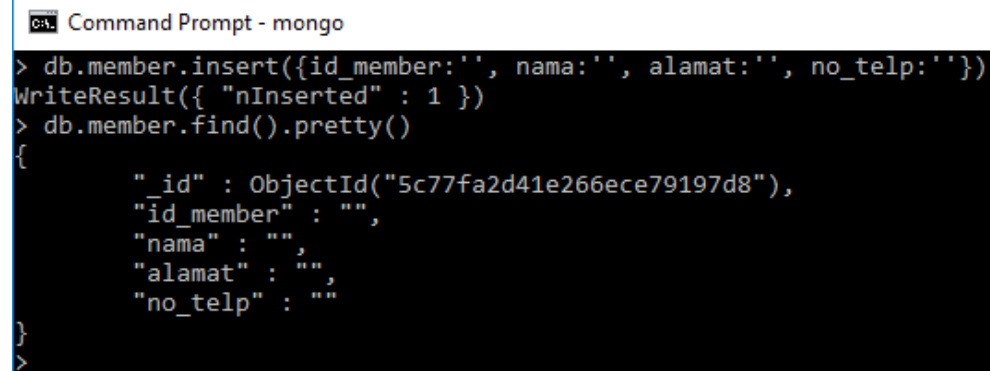

persewaan

```
C:\Windows\system32\cmd.exe - mongo
> use persewaan
switched to db persewaan
> db
persewaan
```

2. membuat table member

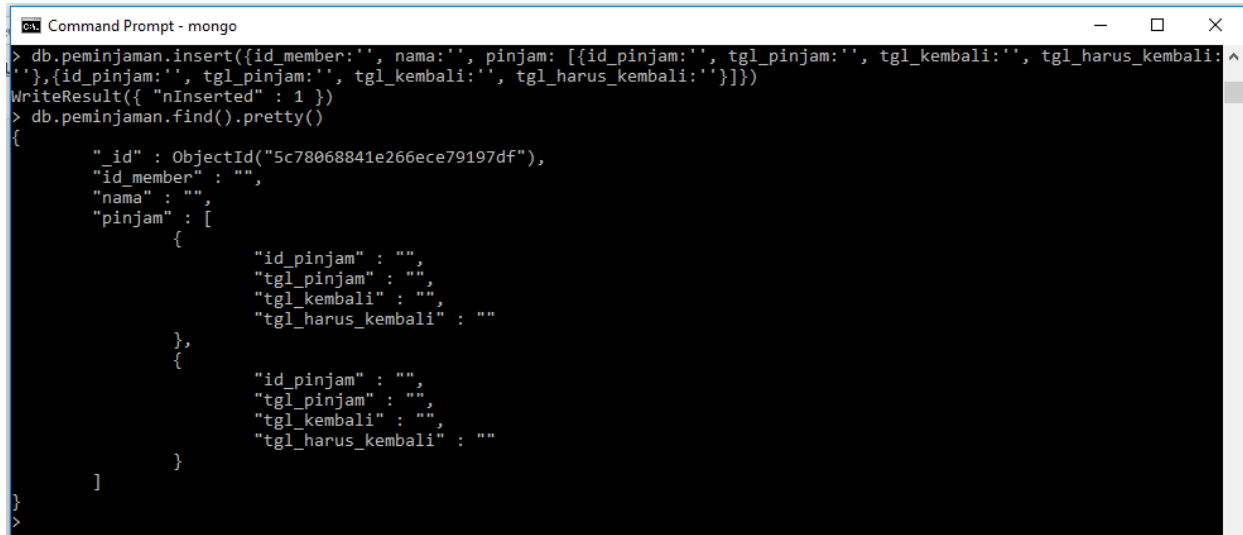

> db.member.insert({id_member:"", nama:"", alamat:"", no_telp:""})

```
Command Prompt - mongo
> db.member.insert({id_member:'', nama:'', alamat:'', no_telp:''})
WriteResult({ "nInserted" : 1 })
> db.member.find().pretty()
{
  "_id" : ObjectId("5c77fa2d41e266ece79197d8"),
  "id_member" : "",
  "nama" : "",
  "alamat" : "",
  "no_telp" : ""
}
>
```

3. membuat tabel peminjaman dan relasi

```
> db.peminjaman.insert({id_member:"", nama:"", pinjam: [{id_pinjam:"", tgl_pinjam:"", tgl_kembali:"", tgl_harus_kembali:""},{id_pinjam:"", tgl_pinjam:"", tgl_kembali:"", tgl_harus_kembali:""}]})
```

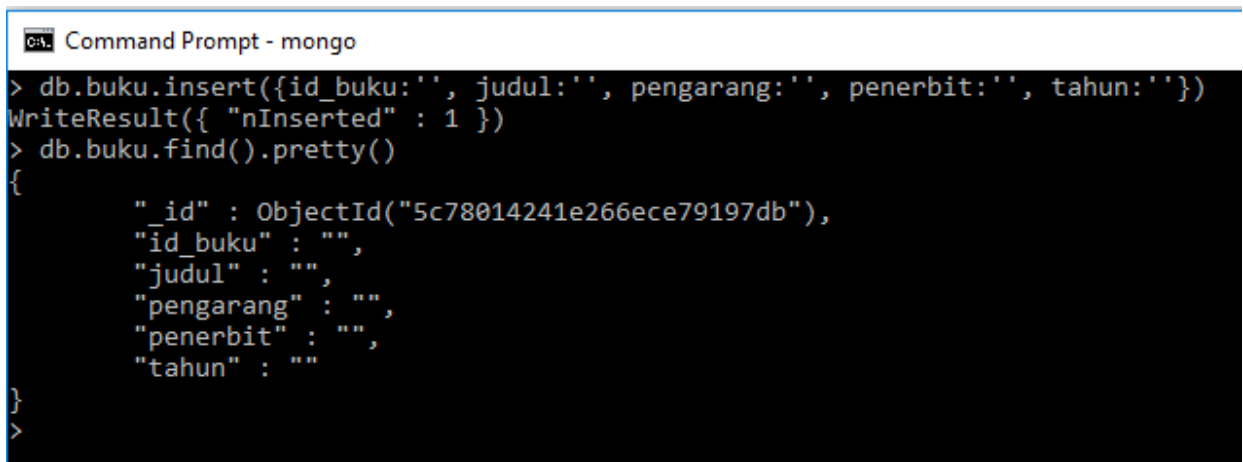

```
Command Prompt - mongo
> db.peminjaman.insert({id_member:"", nama:"", pinjam: [{id_pinjam:"", tgl_pinjam:"", tgl_kembali:"", tgl_harus_kembali:""},{id_pinjam:"", tgl_pinjam:"", tgl_kembali:"", tgl_harus_kembali:""}]})
WriteResult({ "nInserted" : 1 })
> db.peminjaman.find().pretty()
{
  "_id" : ObjectId("5c78068841e266ece79197df"),
  "id_member" : "",
  "nama" : "",
  "pinjam" : [
    {
      "id_pinjam" : "",
      "tgl_pinjam" : "",
      "tgl_kembali" : "",
      "tgl_harus_kembali" : ""
    },
    {
      "id_pinjam" : "",
      "tgl_pinjam" : "",
      "tgl_kembali" : "",
      "tgl_harus_kembali" : ""
    }
  ]
}
```

B. Many to Many

1. membuat tabel buku

```
> db.buku.insert({id_buku:"", judul:"", pengarang:"", penerbit:"", tahun:""})
```

```
Command Prompt - mongo
> db.buku.insert({id_buku:"", judul:"", pengarang:"", penerbit:"", tahun:""})
WriteResult({ "nInserted" : 1 })
> db.buku.find().pretty()
{
  "_id" : ObjectId("5c78014241e266ece79197db"),
  "id_buku" : "",
  "judul" : "",
  "pengarang" : "",
  "penerbit" : "",
  "tahun" : ""
}
```

2. membuat tabel detail dan relasi

> db.detail.insert({id_detail:"", buku: [{id_buku:"", judul:"", pengarang:"", penerbit:"", tahun:"}], peminjaman: [{id_pinjam:"", tgl_pinjam:"", tgl_kembali:"", tgl_harus_kembali:"}]})

```
Command Prompt - mongo
> db.detail.insert({id_detail:'', buku: [{id_buku:'', judul:'', pengarang:'', penerbit:'', tahun:''}], peminjaman: [{id_
pinjam:'', tgl_pinjam:'', tgl_kembali:'', tgl_harus_kembali:''}]})
WriteResult({ "nInserted" : 1 })
> db.detail.find().pretty()
{
  "_id" : ObjectId("5c78088a41e266ece79197e0"),
  "id_detail" : "",
  "buku" : [
    {
      "id_buku" : "",
      "judul" : "",
      "pengarang" : "",
      "penerbit" : "",
      "tahun" : ""
    }
  ],
  "peminjaman" : [
    {
      "id_pinjam" : "",
      "tgl_pinjam" : "",
      "tgl_kembali" : "",
      "tgl_harus_kembali" : ""
    }
  ]
}
```
